(1) *Veronica (M68618), who was the dam of one of Peru's more popular current sires, Solidario (Peru 283-S)

(2) ...I can tell you from our own experience that the introduction of outside bloodlines has improved our breeding programs. First it was through "Principe de la Solana" (Hercules x Ingrata), still going strong at age 29. Principe crossed excellently with predominantly Northern Cayalti x AV Sol de Paijan mares who present only a touch of Sol de Oro (V) blood. (Raul Riso)

(3) ...in particular stallions such as Piloto, Laurel, Hercules, Mantequilla, Palomo, HNS Domingo, AEV Cascabel, FG Candela and others, were exported from Peru and left little or no descendants in that country before their departure. Others born in the USA, such as Principe de la Solana, El Palomilla, RDS Me Llamo Peru, Antares, Soberano, etc., have made a stamp in many breeding programs in North America. (Raul Riso)

(4) It was largely due to don Gustavo's outstanding generosity that the prepotent stallion sired so many fine horses during the time that was left him - though that was plenty of time, as the best estimates as to Sol de Oro's age put the hardy little stallion at thirty years when he died. Gustavo de la Borda's wisdom in rescuing this horse from his mountainside prison has been proved over and over again through the years. Every National Champion of Champions in Peru since 1961 has carried Sol de Oro (V)'s blood; it has also flowed through every U. S. Champion of Champions since 1973. (Brenda Imus)

(5) Another foundation sire in the North was Zañero (Golpe de Arpa x La Monja). Zañero came from a family by the name of Figuerola who lived in Zaña (hence the horse's name) near the Hda. Palomino. Zañero sired Oro Y Plata (Peru 17-S), 1961 National Champion in Peru; Copelia (Peru 134-M), Peruvian National Champion of Champions mare three occasions; Triana who was a full sister to Copelia and was the dam of *Estrellita del Sur+ (M69731), who has twice been US National Champion of Champions mare and who is the dam of US National Champion of Champions stallion, *Sol de Oro CRR+ (S69735); Orgullosa (Peru 157-M), a first prize winner in Lima in 1969; *Festejo Gloria (S68556), National Champion in Peru in 1956; and *Veronica (M68618), who was the dam of one of Peru's more popular current sires, Solidario (Peru 283-S). Zañero also made a major contribution to the breeding program of his owners, the Isola family, siring their 1953 Peruvian National Champion mare, Gamuza, and other top show horses such as Milagro.

(6) 1978 *Resalado Champion of Champions NAPHA, 1983 Champion of Champions Pleasure Stallion

(7) Caramelo introduces the overbearing requirement in the breed that is to produce horses that will continue to have extension in the paso llano but with a more refined, elevated neck and head carriage. There is a change in the center of gravity and the horse, similar to an outboard motor boat, carries more weight on the hindquarters.

(8) Jardinaro was the Peruvian National Champion Breeding Stallion 1950

(9) The names of Sol de Oro (V)'s famous offspring would fill the pages..... to name a few of the more outstanding: El Cid (Peru 75-S), *Piloto (S721179), Caramelo (Peru 22-S), Sol de Oro J (J) (Peru 82-S)

(10) A third stallion of importance in Pinillos' breeding program was Coral (Peru 86-S), who as we have seen earlier was the son of Febo, a Zapata horse. Coral left many offspring for Jorge Juan, including Coralito, the sire of *Victoria (M69750). Coral also sired Peschiera's Lujito (Peru 32-S), Peruvian National Champion of Champions in 1961; *Zaza (M67532), first in "Pisos" (gait) in Peru in 1965; and another important prize winner in Peru named Jequetepeque (Peru 141-S).

(11) Laureado AAOBPPH National Championship Pleasure Division

(12) Since Dr. Siefert's veterinary talents were unequaled anywhere in Peru and Casa Grande's veterinary facilities and clinic were among the most modern in Peru, Casa Grande became "the place" to send horses that were in need of veterinary attention, which Dr. Seifert gladly gave to some of Peru's best stallions in exchange for breedings. Under Dr. Siefert, Casa Grande made extensive use of Perote Huandeño (Peru 225-S) and also El Cid
